CHAPTER 10
Acquisition and Disposition of Property, Plant, and Equipment

ANSWERS TO QUESTIONS

1. The major characteristics of plant assets are (1) that they are acquired for use in operations and not for resale, (2) that they are long-term in nature and usually subject to depreciation, and (3) that they have physical substance.

LO: 1, Bloom: K, Difficulty: Simple, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

2. The company should report the asset at its historical cost of $450,000, not its current value. The main reasons for this position are (1) at the date of acquisition, cost reflects fair value; (2) historical cost involves actual, not hypothetical transactions, and as a result is extremely reliable; and (3) gains and losses should not be anticipated but should be recognized when the asset is sold.

LO: 1, Bloom: AP, Difficulty: Simple, Time: 3-5, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

3. (a) The acquisition costs of land may include the purchase or contract price, the broker’s commission, title search and recording fees, assumed taxes or other liabilities, surveying, demolition (less salvage), and landscaping costs.

(b) Machinery and equipment costs may properly include freight and handling, taxes on the purchase, insurance in transit, installation, and expenses of testing and breaking-in.

(c) If a building is purchased, all repair charges, alterations, and improvements necessary to ready the building for its intended use should be included as a part of the acquisition cost. Building costs in addition to the amount paid to a contractor may include excavation, permits and licenses, architect’s fees, interest accrued on funds obtained for construction purposes (during construction period only) called avoidable interest, insurance premiums applicable to the construction period, temporary buildings and structures, and property taxes levied on the building during the construction period.

LO: 1, Bloom: K, Difficulty: Simple, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

4. (a) Land.
(b) Land.
(c) Land.
(d) Machinery. The only controversy centers on whether fixed overhead should be allocated as a cost to the machinery.
(e) Land Improvements, should be depreciated.
(f) Buildings.
(g) Buildings, provided the benefits in terms of information justify the additional cost involved in providing the information.
(h) Land.
(i) Land.

LO: 1, Bloom: C, Difficulty: Simple, Time: 3-5, AACSB: None, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

5. (a) The position that no fixed overhead should be capitalized assumes that the construction of plant (fixed) assets will be timed so as not to interfere with normal operations. If this were not the case, the savings anticipated by constructing instead of purchasing plant assets would be nullified by reduced profits on the product that could have been manufactured and sold. Thus, construction of plant assets during periods of low activity will have a minimal effect on the total
amount of overhead costs. To capitalize a portion of fixed overhead as an element of the cost of constructed assets would, under these circumstances, reduce the amount assignable to operations and therefore overstate net income in the construction period and understate net income in subsequent periods because of increased depreciation charges.

Questions Chapter 10 (Continued)

(b) Capitalizing overhead at the same rate as is charged to normal operations is defended by those who believe that all manufacturing overhead serves a dual purpose during plant asset construction periods. Any attempt to assign construction activities less overhead than the normal rate implies costing favors and results in the misstatement of the cost of both plant assets and finished goods.

6. (a) Disagree. Organization and promotion expenses should be expensed.

(b) Agree. Architect’s fees for plans actually used in the construction of the building should be charged to the building account as part of the cost.

(c) Agree. GAAP recommends that avoidable interest or actual interest cost, whichever is lower, be capitalized as part of the cost of acquiring an asset if a significant period of time is required to bring the asset to a condition or location necessary for its intended use. Interest costs are capitalized starting with the first expenditure related to the asset and capitalization would continue until the asset is substantially completed and ready for its intended use. Property taxes during construction should also be charged to the building account.

(d) Disagree. Interest revenue is not considered part of the acquisition cost of the building and should be recorded as revenue.

7. Since the land for the plant site will be used in the operations of the firm, it is classified as property, plant, and equipment. The other tract is being held for speculation. It is classified as an investment.

8. A common accounting justification is that all costs associated with the construction of an asset, including interest, should be capitalized in order that the costs can be matched to the revenues which the new asset will help generate.

9. Assets that do not qualify for interest capitalization are (1) assets that are in use or ready for their intended use, and (2) assets that are not being used in the earnings activities of the firm.

10. The avoidable interest is determined by multiplying (an) interest rate(s) by the weighted-average amount of accumulated expenditures on qualifying assets. For the portion of weighted-average accumulated expenditures which is less than or equal to any amounts borrowed specifically to finance construction of the assets, the capitalization rate is the specific interest rate incurred. For the portion of weighted-average accumulated expenditures which is greater than specific debt incurred, the interest rate is a weighted average of all other interest rates incurred.

The amount of interest to be capitalized is the avoidable interest, or the actual interest incurred, whichever is lower.

As indicated in the chapter, an alternative to the specific rate is to use an average borrowing rate.
Questions Chapter 10 (Continued)

11. The total interest cost incurred during the period should be disclosed, indicating the portion capitalized and the portion charged to expense.

Interest revenue from temporarily invested excess funds should not be offset against interest cost when determining the amount of interest to be capitalized. The interest revenue would be reported in the same manner customarily used to report any other interest revenue.

LO: 2, Bloom: K, Difficulty: Simple, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

12. (a) **Assets acquired by issuance of capital stock**—when property is acquired by issuance of common stock, the cost of the property is not measured by par or stated value of such stock. If the stock is actively traded on the market, then the market value of the stock is a fair indication of the cost of the property because the market value of the stock is a good measure of the current cash equivalent price. If the market value of the common stock is not determinable, then the market value of the property should be established and used as the basis for recording the asset and issuance of common stock.

(b) **Assets acquired by gift or donation**—when assets are acquired in this manner a strict cost concept would dictate that the valuation of the asset be zero. However, in this situation, accountants record the asset at its fair value. The credit should be made to Contribution Revenue. Contributions received should be credited to revenue unless the contribution is from a governmental unit. Even in that case, we believe that the credit should be to Contribution Revenue.

(c) **Cash discount**—when assets are purchased subject to a cash discount, the question of how the discount should be handled occurs. If the discount is taken, it should be considered a reduction in the asset cost. Different viewpoints exist, however, if the discount is not taken. One approach is that the discount must be considered a reduction in the cost of the asset. The rationale for this approach is that the terms of these discounts are so attractive that failure to take the discount must be considered a loss because management is inefficient. The other view is that failure to take the discount should not be considered a loss, because the terms may be unfavorable or the company might not be prudent to take the discount. Presently both methods are employed in practice. The former approach is conceptually correct.

(d) **Deferred payments**—assets should be recorded at the present value of the consideration exchanged between contracting parties at the date of the transaction. In a deferred payment situation, there is an implicit (or explicit) interest cost involved, and the accountant should be careful not to include this amount in the cost of the asset.

(e) **Lump sum or basket purchase**—sometimes a group of assets is acquired for a single lump sum. When a situation such as this exists, the accountant must allocate the total cost among the various assets on the basis of their relative fair value.

(f) **Trade or exchange of assets**—when one asset is exchanged for another asset, the accountant is faced with several issues in determining the value of the new asset. The basic principle involved is to record the new asset at the fair value of the new asset or the fair value of what is given up to acquire the new asset, whichever is more clearly evident. However, the accountant must also be concerned with whether the exchange has commercial substance and whether monetary consideration is involved in the transaction. The commercial substance issue rests on whether the expected cash flows on the assets involved are significantly different. In addition, monetary consideration may affect the amount of gain recognized on the exchange under consideration.

LO: 3, 4, Bloom: C, Difficulty: Moderate, Time: 5-10, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication
Questions Chapter 10 (Continued)

13. The cost of such assets includes the purchase price, freight and handling charges incurred, insurance on the equipment while in transit, cost of special foundations if required, assembly and installation costs, and costs of conducting trial runs. Costs thus include all expenditures incurred in acquiring the equipment and preparing it for use. When plant assets are purchased subject to cash discounts for prompt payment, the question of how the discount should be handled arises. The appropriate view is that the discount, whether taken or not, is considered a reduction in the cost of the asset. The rationale for this approach is that the real cost of the asset is the cash or cash equivalent price of the asset. Similarly, assets purchased on long-term payment plans should be accounted for at the present value of the consideration exchanged between the contracting parties at the date of the transaction.

LO: 3, Bloom: C, Difficulty: Moderate, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

14. \[ \frac{\text{Fair value of land}}{\text{Fair value of building and land}} \times \text{Cost} = \text{Cost allocated to land} \]

\[ \frac{500,000}{2,500,000} \times 2,200,000 = 440,000 \]  
(Cost allocated to land)

\[ \frac{\text{Fair value of building}}{\text{Fair value of building and land}} \times \text{Cost} = \text{Cost allocated to building} \]

\[ \frac{2,000,000}{2,500,000} \times 2,200,000 = 1,760,000 \]  
(Cost allocated to building)

LO: 3, Bloom: AP, Difficulty: Moderate, Time: 3-5, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

15. $10,000 (cash payment) + $4,208 (present value of note) = $14,208

LO: 3, Bloom: AP, Difficulty: Simple, Time: 3-5, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

16. Ordinarily accounting for the exchange of nonmonetary assets should be based on the fair value of the asset given up or the fair value of the asset received, whichever is more clearly evident. Thus any gains and losses on the exchange should be recognized immediately. If the fair value of either asset is not reasonably determinable, the book value of the asset given up is usually used as the basis for recording the nonmonetary exchange. This approach is always employed when the exchange has commercial substance. The general rule is modified when exchanges lack commercial substance. In this case, the enterprise is not considered to have completed the earnings process and therefore a gain should not be recognized. However, a loss should be recognized immediately. In certain situations, gains on an exchange that lacks commercial substance may be recorded when monetary consideration is received. When monetary consideration is received, it is assumed that a portion of the earnings process is completed, and therefore, a partial gain is recognized.

LO: 3, Bloom: K, Difficulty: Moderate, Time: 5-7, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

17. In accordance with GAAP which requires losses to be recognized immediately, the entry should be:

<table>
<thead>
<tr>

<td>30,000</td>
</tr>
<tr>
<td>Cash</td>
<td></td>
<td>26,000</td>
</tr>
</tbody>
</table>

*Value of the note

**Book value of the old asset

18. Ordinarily such expenditures include (1) the recurring costs of servicing necessary to keep property in good operating condition, (2) cost of renewing structural parts of major plant units, and (3) costs of major overhauling operations which may or may not extend the life beyond original expectation.

The first class of expenditures represents the day-to-day service and in general is chargeable to operations as incurred. These expenditures should not be charged to the asset accounts.

The second class of expenditures may or may not affect the recorded cost of property. If the asset is rigidly defined as a distinct unit, the renewal of parts does not usually disturb the asset accounts; however, these costs may be capitalized and apportioned over several fiscal periods on some equitable basis. If the property is conceived in terms of structural elements subject to separate replacement, such expenditures should be charged to the plant asset accounts.

The third class of expenditures, major overhauls, is usually entered through the asset accounts because replacement of important structural elements is usually involved. Other than maintenance charges mentioned above are those expenditures which add some physical aspect not a part of the asset at the time of its original acquisition. These expenditures may be capitalized in the asset account.

An expenditure which extends the life but not the usefulness of the asset is often charged to the Accumulated Depreciation account. A more appropriate treatment requires retiring from the asset and accumulated depreciation accounts the appropriate amounts (original cost from the asset account) and to capitalize in the asset account the new cost. Often it is difficult to determine the original cost of the item being replaced. For this reason, the replacement or renewal is charged to the Accumulated Depreciation account.

19. (a) **Additions.** Additions represent entirely new units or extensions and enlargements of old units. Expenditures for additions are capitalized by charging either old or new asset accounts depending on the nature of the addition.

(b) **Major Repairs.** Expenditures to replace parts or otherwise to restore assets to their previously efficient operating condition are regarded as repairs. To be considered a major repair, several periods must benefit from the expenditure. The cost should be handled as an addition, improvement or replacement depending on the type of major repair made.

(c) **Improvements.** An improvement does not add to existing plant assets. Expenditures for such betterments represent increases in the quality of existing plant assets by rearrangements in plant layout or the substitution of improved components for old components so that the facilities have increased productivity, greater capacity, or longer life. The cost of improvements is accounted for by charges to the appropriate property accounts, the elimination of the cost, and accumulated depreciation associated with the replaced components, if any.

**Replacements.** Replacements involve an “in kind” substitution of a new asset or part for an old asset or part. Accounting for major replacements requires entries to retire the old asset or part and to record the cost of the new asset or part. Minor replacements are treated as period costs.
Questions Chapter 10 (Continued)

20. The cost of installing the machinery should be capitalized, but the extra month’s wages paid to the dismissed employees should not, as this payment did not add any value to the machinery.

The extra wages should be charged off immediately as an expense; the wages could be shown as a separate item in the income statement for disclosure purposes.

LO: 4, Bloom: C, Difficulty: Moderate, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

21. (a) **Overhead of a business that builds its own equipment.** Some accountants have maintained that the equipment account should be charged only with the additional overhead caused by such construction. However, a more realistic figure for the cost of equipment results if the plant asset account is charged for overhead applied on the same basis and at the same rate as used for production.

(b) **Cash discounts on purchases of equipment.** Some accountants treat all cash discounts as financial or other revenue, regardless of whether they arise from the payment of invoices for merchandise or plant assets. Others take the position that only the net amount paid for plant assets should be capitalized on the basis that the discount represents a reduction of price and is not income. The latter position seems more logical in light of the fact that plant assets are purchased for use and not for sale and that they are written off to expense over a long period of time.

(c) **Interest paid during construction of a building.** GAAP requires that avoidable or actual interest cost, whichever is lower, be capitalized as part of the cost of acquiring an asset if a significant period of time is required to bring the asset to a condition and location necessary for its intended use.

(d) **Cost of a safety device installed on a machine.** This is an addition to the machine and should be capitalized in the machinery account if material.

(e) **Freight on equipment returned before installation,** for replacement by other equipment of greater capacity. If ordering the first equipment was an error, whether due to judgment or otherwise, the freight should be regarded as a loss. However, if information became available after the order was placed which indicated purchase of the new equipment was more advantageous, the cost of the return freight may be viewed as a necessary cost of the new equipment.

(f) **Cost of moving machinery to a new location.** Normally, only the cost of one installation should be capitalized for any piece of equipment. Thus, the original installation and any accumulated depreciation relating thereto should be removed from the accounts and the new installation costs (i.e., cost of moving) should be capitalized. In cases where this is not possible and the cost of moving is substantial, it is capitalized and depreciated appropriately over the period during which it makes a contribution to operations.

(g) **Cost of plywood partitions erected in the remodeling of the office.** This is a part of the remodeling cost and may be capitalized as part of the remodeling itself if of such a nature that it is an addition to the building and not merely a replacement or repair.

(h) **Replastering of a section of the building.** This seems more in the nature of a repair than anything else and as such should be treated as an expense.

(i) **Cost of a new motor for one of the trucks.** This probably extends the useful life of the truck. As such it may be viewed as an extraordinary repair and charged against the accumulated depreciation on the truck. The remaining service life of the truck should be estimated and the depreciation adjusted to write off the new book value, less salvage, over the remaining useful
life. A more appropriate treatment is to remove the cost of the old motor and related depreciation and add the cost of the new motor if possible.

LO: 1 2, Bloom: C, Difficulty: Moderate, Time: 5-10, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

22. This approach is not correct since at the very minimum the investor should be aware that certain assets are used in the business, which are not reflected in the main body of the financial statements. Either the company should keep these assets on the balance sheet or they should be recorded at salvage value and the resulting gain recognized. In either case, there should be a clear indication that these assets are fully depreciated, but are still being used in the business.

LO: 3, Bloom: K, Difficulty: Simple, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

23. Gains or losses on plant asset retirements should be shown in the income statement along with other items that arise from customary business activities-usually as other revenues and gains or other expenses and losses.

LO: 5, Bloom: K, Difficulty: Simple, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

*24. The criteria for evaluating whether contributions are unconditional (and thus recognized immediately in income) or conditional (for which income recognition is deferred) depend on the terms of the gift or grant agreement. The focus is on whether a gift or grant agreement has the following terms.

(1) specifies a “barrier or hurdle” that the recipient must overcome to be entitled to the resources. A barrier is the inclusion of a measurable performance requirement such as the degree of completion or specific output or outcome.

(2) releases the donor from its obligation to transfer resources (or if assets are advanced, a right to demand their return) if the barrier or hurdle is not achieved.

An agreement that contains both is a conditional contribution. An agreement that omits one or both is unconditional.

LO: 6, Bloom: K, Difficulty: Simple, Time: 3-5, AACSB: Communication, AICPA BB: None, AICPA FC: Reporting, AICPA PC: Communication

*25. The distinction between a conditional and unconditional contribution is important from an accounting point of view because it affects when expense and revenue are reported. In an unconditional contribution revenue is recognized immediately whereas in a conditional contribution is deferred.

LO: 5, Bloom: AP, Difficulty: Moderate, Time: 5-7, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
*BE10.16

This transaction should be considered an exchange transaction. This is an arrangement in which commensurate value is exchanged between two parties and it should follow the accounting for an exchange transaction.

LO: 6, Bloom: AP, Difficulty: Simple, Time: 5-7, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

*BE10.17

This transaction is a conditional contribution. The grant is includes a measurable barrier (6,000 square feet) that must be achieved and a right of return of unused assets for unmet requirements.

LO: 6, Bloom: AP, Difficulty: Simple, Time: 5-7, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

*BE10.18

This grant is considered a nonexchange transaction accounted for under the contribution accounting model. The foundation does not receive direct commensurate value in exchange for the resources provided. University retains all rights to the research and findings; therefore, Knowledge University and the general public receive the primary benefits.

LO: 6, Bloom: AP, Difficulty: Simple, Time: 5-7, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None

### EXERCISE 10.3 (10–15 minutes)

1. **Trucks** ................................. 13,900.00  
   Cash ........................................ 13,900.00

2. **Trucks** ................................. 14,727.26*  
   Discount on Notes Payable ............. 1,272.74  
   Cash ........................................ 2,000.00  
   Notes Payable ......................... 14,000.00  
   *PV of $14,000 @ 10% for 1 year =  
     $14,000 X .90909 = $12,727.26  
     $12,727.26 + $2,000.00 = $14,727.26

3. **Trucks** ................................. 15,200.00  
   Cost of Goods Sold ...................... 12,000.00  
   Inventory ................................ 12,000.00  
   Sales Revenue ............................ 15,200.00  

   [Note to instructor: The selling (retail) price of the computer system appears to be a better gauge of the fair value of the consideration given than the list price of the truck as a gauge of the fair value of the consideration received (truck). Vehicles are often sold at a price below the list price.]

4. **Trucks** ................................. 13,000.00*  
   Common Stock ............................ **10,000.00**  
   Paid-in Capital in Excess of Par –  
     Common Stock ............................ ***3,000.00**  

   * (1,000 shares X $13 = $13,000)  
   ** (1,000 shares x $10)  
   *** [1,000 shares x ($13 - $10)]
EXERCISE 10.4 (20–25 minutes)

Purchase

- Cash paid for equipment, including sales tax of $5,000: $105,000
- Freight and insurance while in transit: 2,000
- Cost of moving equipment into place at factory: 3,100
- Wage cost for technicians to test equipment: 4,000
- Special plumbing fixtures required for new equipment: 8,000
- Total cost: 122,100

The insurance premium of $1,500 paid during the first year of operation of this equipment should be reported initially as prepaid insurance and then adjusted to insurance expense, and not be capitalized. Repair cost of $1,300 incurred in the first year of operations related to this equipment should be reported as repair and maintenance expense, and not be capitalized. Both these costs relate to periods subsequent to purchase.

Construction

- Material and purchased parts ($200,000 × .98): $196,000
- Labor costs: 190,000
- Overhead costs: 50,000
- Cost of installing equipment: 4,400
- Total cost: 440,400

Note that the cost of material and purchased parts is reduced by the amount of cash discount not taken (.02 × $200,000 = $4,000) because the equipment should be reported at its cash equivalent price. The imputed interest on funds used during construction related to stock financing of $14,000 should not be capitalized or expensed. This item is an opportunity cost that is not reported.

Profit on self-construction of $30,000 should not be reported. Profit should only be reported when the asset is sold.

LO: 2, Bloom: AP, Difficulty: Moderate, Time: 20-25, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
EXERCISE 10.10 (20–25 minutes)

Situation I. $80,000—The requirement is the amount Apolo Ohno should report as capitalized interest at 12/31/20. The amount of interest eligible for capitalization is

Weighted-Average Accumulated Expenditures X Interest Rate = Avoidable Interest

Since Apolo Ohno has outstanding debt incurred specifically for the construction project, in an amount greater than the weighted-average accumulated expenditures of $800,000, the interest rate of 10% is used for capitalization purposes. Therefore, the avoidable interest is $80,000, which is less than the actual interest.

$800,000 X .10 = $80,000

Finally, per FASB ASC 835-20-30-1 the interest earned of $250,000 is irrelevant to the question addressed in this problem because such interest earned on the unexpended portion of the loan is not to be offset against the amount eligible for capitalization.

Situation II. $39,000—The requirement is total interest costs to be capitalized. GAAP identifies assets which qualify for interest capitalization: assets constructed for an enterprise’s own use and assets intended for sale or lease that are produced as discrete projects. Inventories that are routinely produced in large quantities on a repetitive basis do not qualify for interest capitalization. Therefore, only $30,000 and $9,000 are capitalized.
EXERCISE 10.10 (Continued)

Situation III. $385,000—The requirement is to determine the amount of interest to be capitalized on the financial statements at April 30, 2021. The GAAP requirements are met: (1) expenditures for the asset have been made, (2) activities that are necessary to get the asset ready for its intended use are in progress, and (3) interest cost is being incurred. The amount to be capitalized is determined by applying an interest rate to the weighted-average amount of accumulated expenditures for the asset during the period. Because the $7,000,000 of expenditures incurred for the year ended April 30, 2021, were incurred evenly throughout the year, the weighted-average amount of expenditures for the year is $3,500,000, ($7,000,000 ÷ 2). Therefore, the amount of interest to be capitalized is $385,000 ($3,500,000 X .11). In any period, the total amount of interest cost to be capitalized shall not exceed the total amount of interest cost incurred by the enterprise. (Total interest is $1,100,000 = $10,000,000 x .11). Finally, the interest earned of $650,000 is irrelevant to the question addressed in this problem because such interest earned on the unexpended portion of the loan is not to be offset against the amount eligible for capitalization.

LO: 1, 3, Bloom: AP, Difficulty: Difficult, Time: 15-20, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
EXERCISE 10.13 (20–25 minutes)

1. Land ................................................................. 350,000
   Building ....................................................... 1,050,000
   Equipment .................................................... 700,000
   Common Stock (12,500 X $100) ..................... 1,250,000
   Paid-in Capital in Excess of
   Par—Common Stock
   ($2,100,000 – $1,250,000) ......................... 850,000

The cost of the property, plant and equipment is $2,100,000 ($12,500 X $168). This cost is allocated based on appraisal values as follows:

   Land \( \frac{400,000}{2,400,000} \times 2,100,000 = 350,000 \)

   Building \( \frac{1,200,000}{2,400,000} \times 2,100,000 = 1,050,000 \)

   Equipment \( \frac{800,000}{2,400,000} \times 2,100,000 = 700,000 \)

2. Buildings ($105,000 plus $161,000) .................. 266,000
   Equipment ..................................................... 135,000
   Land Improvements ........................................ 122,000
   Land .............................................................. 18,000
   Cash .............................................................. 541,000d

\( d(266,000 + 135,000 + 122,000 + 18,000) \)

3. Equipment ..................................................... 265,300
   Cash ............................................................ 265,300

\( ($10,500 plus $254,800, which is 98%
   (1.00 - .02) of $260,000. ) \)

<td></td>
<td>$120,000</td>
</tr>
</tbody>
</table>

   Machinery ........................................................................... 75,000
   Equipment .......................................................................... 25,000
   Cash .................................................................................. 100,000

   Acquisition of Asset 3

Use the cash price as a basis for recording the asset with a discount recorded on the note.

   Machinery ........................................................................... 35,900
   Discount on Notes Payable ($40,000 – $35,900)..... 4,100
   Cash .................................................................................. 10,000
   Notes Payable ................................................................. 30,000
EXERCISE 10.16 (Continued)

Acquisition Asset 4

Since the exchange lacks commercial substance, a gain will be recognized in the proportion of cash received ($10,000 / $80,000) times the $20,000 gain (FMV of $80,000 minus BV of $60,000). The gain recognized will then be $2,500 with $17,500 of it being unrecognized and used to reduce the basis of the asset acquired.

\[ \text{Gain on Disposal of Machinery} = (\text{FMV of Machinery} - \text{BV of Machinery}) \times \left( \frac{\text{Cash Received}}{\text{Total Consideration}} \right) \]

\[ \text{FMV of Machinery} = \text{BV of Machinery} + \text{Gain on Disposal of Machinery} \]

\[ \text{Cash Received} = \text{Gain on Disposal of Machinery} \times \left( \frac{\text{Cash Received}}{\text{Total Consideration}} \right) \]

\[ \text{Gain on Disposal of Machinery} = \left( \frac{\text{Cash Received}}{\text{Total Consideration}} \right) \times (\text{BV of Machinery} + \text{Gain on Disposal of Machinery}) \]

| Machinery (New) | $52,500 |
| Accumulated Depreciation—Machinery | $40,000 |
| Cash | $10,000 |
| Machinery (Old) | $100,000 |
| Gain on Disposal of Machinery | $2,500 |

\[ ($70,000 + $10,000) - ($100,000 - $40,000) \]

Acquisition of Asset 5

In this case the equipment should be placed on Hayes’s books at the fair market value of the stock. The difference between the stock’s par value and its fair market value should be credited to Paid-in Capital in Excess of Par—Common Stock.

\[ \text{Equipment (100 shares} \times \text{ $11}) = \text{1,100} \]

\[ \text{Common Stock (100 shares} \times \text{ $8 par}) = \text{800} \]

\[ \text{Paid-in Capital in Excess of Par} = \text{300} \]

\[ \text{Common Stock} = \text{[$11 - $8] \times 100} \]
EXERCISE 10.16 (Continued)

Construction of Building

Schedule of Weighted-Average Accumulated Expenditures

<table>
<thead>
<tr>
<th>Date</th>
<th>Amount</th>
<th>Capitalization Period</th>
<th>Current Year Capitalization</th>
<th>Weighted-Average Accumulated Expenditures</th>
</tr>
</thead>
<tbody>
<tr>
<td>February 1</td>
<td>$150,000</td>
<td>9/12</td>
<td>$112,500</td>
<td></td>
</tr>
<tr>
<td>February 1</td>
<td>$120,000</td>
<td>9/12</td>
<td>90,000</td>
<td></td>
</tr>
<tr>
<td>June 1</td>
<td>$360,000</td>
<td>5/12</td>
<td>150,000</td>
<td></td>
</tr>
<tr>
<td>September 1</td>

<td>$100,000</td>
<td>0/12</td>
<td>0</td>
<td></td>
</tr>
<tr>
<td></td>
<td>$1,210,000</td>
<td></td>
<td>$432,500</td>
<td></td>
</tr>
</tbody>
</table>

Note that the capitalization is only 9 months in this problem.

Avoidable Interest

\[
\text{Avoidable Interest} = \text{Weighted-Average Accumulated Expenditures} \times \text{Interest Rate}
\]

\[
\text{Avoidable Interest} = 432,500 \times 0.12 = 51,900^a
\]

The weighted expenditures are less than the amount of specific borrowing; the specific borrowing rate is used.

Land Cost $150,000^b
Building Cost $1,111,900^c [(120,000 + 360,000 + 480,000 + 100,000) + 51,900^a]

EXERCISE 10.21 (20–25 minutes)

(a) Any addition to plant assets is capitalized because a new asset has been created. This addition increases the service potential of the plant.

(b) Expenditures that do not increase the service benefits of the asset are expensed. Painting costs are considered ordinary repairs because they maintain the existing condition of the asset or restore it to normal operating efficiency.

(c) The approach to follow is to remove the old book value of the roof and substitute the cost of the new roof. It is assumed that the expenditure increases the future service potential of the asset.

(d) Conceptually, the book value of the old electrical system should be removed. However, practically it is often difficult if not impossible to determine this amount. In this case, one of two approaches is followed. One approach is to capitalize the replacement on the theory that sufficient depreciation was taken on the old system to reduce the carrying amount to almost zero. A second approach is to debit accumulated depreciation on the theory that the replacement extends the useful life of the asset and thereby recaptures some or all of the past depreciation. In our present situation, the problem specifically states that the useful life is not extended and therefore debiting Accumulated Depreciation is inappropriate. Thus, this expenditure should be added to the cost of the plant facility.

(e) See discussion in (d) above. In this case, because the useful life of the asset has increased, a debit to Accumulated Depreciation would appear to be the most appropriate.

EXERCISE 10.22 (15–20 minutes)

(b) Items in the fact situation which were not used to determine the answer to (a) above are as follows:

1. Interest imputed on equity (stock) financing of $8,500 is not permitted by GAAP and thus does not appear in any financial statement.

2. Land site number 623, which was acquired for $650,000, should be included in Reagan’s balance sheet as land held for resale (investment section).

3. Royalty payments of $17,500 should be included as a normal operating expense in Reagan’s income statement.

<td>75% (690/920)</td>
</tr>
<tr>
<td>Total</td>
<td>$920,000</td>
<td>100%</td>
</tr>
</tbody>
</table>

|                  | ($740,000 X .25) | $185,000 |
| Land             | ($740,000 X .75) | 555,000  |
| Building         |                  | $740,000 |
| Total            |                  |          |

(b) Items in the fact situation that were not used to determine the answer to (a) above, are as follows:

1. The tract of land, which was acquired for $150,000 as a potential future building site, should be included in Lobo’s balance sheet as an investment in land.

2. The $110,000 and $320,000 book values respective to the land and building carried on Mendota’s books at the exchange date are not used by Lobo since they are not relevant.
PROBLEM 10.2 (Continued)

3. The $12,080 loss (Schedule 2) incurred on the scrapping of a machine on June 30, 2020, should be included in the other expenses and losses section in Lobo’s income statement. The $67,920 accumulated depreciation (Schedule 3) should be deducted from the Accumulated Depreciation—Equipment account in Lobo’s balance sheet.

4. The $3,000 loss on sale of equipment on July 1, 2020 (Schedule 4) should be included in the other expenses and losses section of Lobo’s income statement. The $21,000 accumulated depreciation (Schedule 4) should be deducted from the Accumulated Depreciation—Equipment account in Lobo’s balance sheet.

</tr>
</tbody>
</table>

LO: 1, 3, Bloom: AP, Difficulty: Difficult, Time: 35-45, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
The following accounting treatment appears appropriate for these items:

Land—The loss on the condemnation of the land of $9,000 ($40,000 – $31,000) should be reported as an unusual and for infrequent item on the income statement. The $35,000 land purchase has no income statement effect.

Building—There is no recognized gain or loss on the demolition of the building. The entire purchase cost ($15,000), decreased by the demolition proceeds ($3,600), is allocated to land.

Warehouse—The gain on the destruction of the warehouse should be reported as an unusual and/or infrequent item. The gain is computed as follows:

\[
\begin{align*}
\text{Insurance proceeds} & \hspace{1cm} 74,000 \\
\text{Deduct: Cost} & \hspace{1cm} 70,000 \\
\text{Less: Accumulated depreciation} & \hspace{1cm} 16,000 \\
\text{Realized gain} & \hspace{1cm} 20,000 \\
\end{align*}
\]

Some contend that a portion of this gain should be deferred because the proceeds are reinvested in similar assets. We do not believe such an approach should be permitted. Deferral of the gain in this situation is not permitted under GAAP.

Machine—The recognized gain on the transaction would be computed as follows:

\[
\begin{align*}
\text{Fair value of old machine} & \hspace{1cm} 7,200 \\
\text{Deduct: Book value of old machine} & \hspace{1cm} \\
\text{Cost} & \hspace{1cm} 8,000 \\
\text{Less: Accumulated depreciation} & \hspace{1cm} 2,800 \\
\text{Total gain} & \hspace{1cm} 2,000 \\
\end{align*}
\]

Total gain recognized = \( \frac{2,000 \times 900}{900 + 6,300} = 250 \)

The gain deferred is $1,750 ($2,000 – $250)

\(*($7,200 - $900)\)
PROBLEM 10.4 (Continued)

This gain would probably be reported in other revenues and gains. It might be reported as an unusual item if the company believes that such a situation occurs infrequently and if material. The cost of the new machine would be capitalized at $4,550.

Fair value of new machine ($7,200 - $900)................. $6,300
Less: Gain deferred ($2,000 – $250).......................... 1,750
Cost of new machine ............................................. $4,550

Furniture—The contribution of the furniture would be reported as a contribution expense of $3,100 with a related gain on disposition of furniture of $950: $3,100 – ($10,000 – $7,850). The contribution expense and the related gain may be netted, if desired.

Automobile—The loss on sale of the automobile of $2,580: [$2,960 – ($9,000 – $3,460)] should probably be reported in the other expenses or losses section.

<tr>
<td></td>
<td>$4,000,000</td>
<td></td>
<td></td>
<td>$1,250,000</td>
</tr>
</tbody>
</table>

(b) Weighted-Average Accumulated Expenditures

\[
\text{Weighted-Average Accumulated Expenditures} \times \text{Weighted-Average Interest Rate} = \text{Avoidable interest}
\]

Loans Outstanding During Construction Period

<table>
<thead>
<tr>
<th>Principal</th>
<th>Actual Interest</th>
</tr>
</thead>
<tbody>
<tr>
<td>10% five-year note</td>
<td>$2,000,000</td>
</tr>
<tr>
<td>12% ten-year bond</td>
<td>3,000,000</td>
</tr>
<tr>
<td><strong>Total principal</strong></td>
<td><strong>$5,000,000</strong></td>
</tr>
</tbody>
</table>

\[
\frac{\text{Total interest}}{\text{Total principal}} = \frac{$560,000}{$5,000,000} = 11.2\% \text{ (weighted-average rate)}
\]

(c) (1) and (2)

- Total actual interest cost $560,000
- Total interest capitalized $140,000
- Total interest expensed ($560,000 - $140,000) $420,000
1. Holyfield Corporation
Cash ............................................................... 23,000
Machinery ($92,000 - $23,000) ......................... 69,000
Accumulated Depreciation—Machinery ............ 60,000
Loss on Disposal of Machinery ....................... 8,000
Machinery ..................................................... 160,000

Computation of loss: Book value $100,000
($160,000 - $60,000)
Less: Fair value 92,000
Loss $ 8,000

Dorsett Company
Machinery .......................................................... 92,000
Accumulated Depreciation—Machinery ............ 45,000
Loss on Disposal of Machinery ....................... 6,000
Cash ............................................................. 23,000
Machinery ..................................................... 120,000

Computation of loss: Book value $ 75,000
($120,000 - $45,000)
Less: Fair value 69,000
Loss $ 6,000

2. Holyfield Corporation
Machinery .......................................................... 92,000
Accumulated Depreciation—Machinery ............ 60,000
Loss on Disposal of Machinery ....................... 8,000
Machinery ..................................................... 160,000

Winston Company
Machinery ($92,000 – $11,000) ......................... 81,000
Accumulated Depreciation—Machinery ............ 71,000
Machinery ..................................................... 152,000

Computation of gain deferred:
Fair value $92,000
Less: Book value 81,000
($152,000 - $71,000)
Gain deferred $11,000
PROBLEM 10.8 (Continued)

3. Holyfield Corporation
   Machinery .................................................. 95,000\textsuperscript{f}
   Accumulated Depreciation—Machinery .......... 60,000
   Loss on Disposal of Machinery ..................... 8,000\textsuperscript{a}
   Machinery .................................................. 160,000
   Cash ......................................................... 3,000

   Liston Company
   Machinery ($95,000\textsuperscript{f} - $3,000) ......................... 92,000
   Accumulated Depreciation—Machinery .......... 75,000
   Cash ......................................................... 3,000
   Machinery .................................................. 160,000
   Gain on Disposal of Machinery ..................... 10,000\textsuperscript{e}

   *Fair value $ 95,000\textsuperscript{f}
   Less: Book value 85,000
   ($160,000 - $75,000)
   Gain $ 10,000\textsuperscript{e}

   Because the exchange has commercial substance, the entire gain should be recognized.

4. Holyfield Corporation
   Machinery .................................................. 185,000
   Accumulated Depreciation—Machinery .......... 60,000
   Loss on Disposal of Machinery ..................... 8,000\textsuperscript{a}
   Machinery .................................................. 160,000
   Cash ......................................................... 93,000

   Greeley Company
   Cash .......................................................... 93,000
   Inventory ...................................................... 92,000
   Sales Revenue ............................................... 185,000
   Cost of Goods Sold ......................................... 130,000
   Inventory ...................................................... 130,000

LO: 3, Bloom: AP, Difficulty: Difficult, Time: 35-45, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
(a) Exchange has commercial substance:

**Hyde, Inc.’s Books**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machinery (B)</td>
<td>75,000</td>
</tr>
<tr>
<td>Accumulated Depreciation—Machinery (A)</td>
<td>40,000</td>
</tr>
<tr>
<td>Machinery (A)</td>
<td>96,000</td>
</tr>
<tr>
<td>Gain on Disposal of Machinery</td>
<td>4,000</td>
</tr>
<tr>
<td>Cash</td>
<td>15,000</td>
</tr>
</tbody>
</table>

*Computation of gain on disposal:

\[
\text{Gain on disposal} = 75,000 - (96,000 - 40,000) = 4,000
\]

**Wiggins, Inc.’s Books**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash</td>
<td>15,000</td>
</tr>
<tr>
<td>Machinery (A)</td>
<td>60,000</td>
</tr>
<tr>
<td>Accumulated Depreciation—Machinery (B)</td>
<td>47,000</td>
</tr>
<tr>
<td>Machinery (B)</td>
<td>110,000</td>
</tr>
<tr>
<td>Gain on Disposal of Machinery</td>
<td>12,000</td>
</tr>
</tbody>
</table>

(b) Exchange lacks commercial substance:

**Hyde, Inc.’s Books**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machinery (B) ($75,000 – $4,000)</td>
<td>71,000</td>
</tr>
<tr>
<td>Accumulated Depreciation—Machinery (A)</td>
<td>40,000</td>
</tr>
<tr>
<td>Machinery (A)</td>
<td>96,000</td>
</tr>
<tr>
<td>Cash</td>
<td>15,000</td>
</tr>
</tbody>
</table>

*Computation of gain deferred:

\[
\text{Fair value} = 60,000
\]

\[
\text{Less: Book value} = (96,000 - 40,000) = 56,000
\]

\[
\text{Gain deferred} = 4,000
\]
PROBLEM 10.9 (Continued)

Wiggins, Inc.’s Books

Cash..................................................................................... 15,000
Machinery (A) ................................................................. 50,400**
Accumulated Depreciation—Machinery (B)........ 47,000
Machinery (B) ................................................................. 110,000
Gain on Disposal of Machinery ......................... 2,400*

Computation of total gain:
Fair value of Asset B $75,000
Less: Book value of Asset B 63,000
Gain on disposal of assets $12,000

*Gain recognized = \( \frac{15,000}{15,000 + 60,000} \times 12,000 = \$2,400 \)

**Fair value of asset acquired $60,000
Less: Gain deferred ($12,000 – $2,400) 9,600
Basis of Machinery A $50,400

OR

Book value of Machinery B $63,000
Less: Portion of book value sold 12,600
$50,400

Note to instructor: This illustrates the exception to no gain or loss recognition for exchanges that lack commercial substance. Although it would be rare for an exchange to lack commercial substance when cash is received, a gain can be recognized based on the proportion of cash received to the overall fair value.

LO: 3, Bloom: AP, Difficulty: Difficult, Time: 30-40, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
PROBLEM 10.10

(a) Has Commercial Substance

**Marshall Construction**

1. Equipment ($82,000 + $118,000)...................... 200,000
   Accumulated Depreciation—Equipment ........ 50,000
   Loss on Disposal of Equipment...................... 8,000*

   Equipment............................................ 140,000
   Cash ................................................. 118,000

   *Computation of loss:
   Book value of old crane
   ($140,000 – $50,000) $90,000
   Less: Fair value of old crane 82,000
   Loss on disposal of equipment $  8,000

**Brigham Manufacturing**

2. Cash.......................................................... 118,000
   Inventory.................................................. 82,000
   Sales Revenue........................................... 200,000

   Cost of Goods Sold...................................... 165,000
   Inventory............................................... 165,000

(b) Lacks Commercial Substance

1. Marshall Construction should record the same entry as in part (a) above, since the exchange resulted in a loss.

2. Brigham should record the same entry as in part (a) above. No gain is deferred because we are assuming that Marshall is a customer. In addition, because the cash involved is greater than 25% of the value of the exchange, the entire transaction is considered a monetary transaction and a gain is recognized.
PROBLEM 10.10 (Continued)

(c) Has Commercial Substance

Marshall Construction
1. Equipment ($98,000 + $102,000) .................. 200,000
   Accumulated Depreciation—Equipment ...... 50,000
   Equipment ........................................ 140,000
   Cash ............................................... 102,000
   Gain on Disposal of Equipment .......... 8,000*

*Computation of gain:
   Fair value of old crane $98,000
   Less: Book value of old crane
   ($140,000 – $50,000) 90,000
   Gain on Disposal of Equipment $ 8,000

Brigham Manufacturing
2. Cash .................................................. 102,000
   Inventory .......................................... 98,000
   Sales Revenue .................................... 200,000

   Cost of Goods Sold ......................... 165,000
   Inventory .......................................... 165,000

(d) Marshall Construction
1. Equipment ........................................ 200,000
   Accumulated Depreciation—Equipment ...... 50,000
   Cash ............................................... 103,000
   Equipment ........................................ 140,000
   Gain on Disposal of Equipment .......... 7,000*

*[Fair Value—Old ($97,000) – Book Value—Old ($90,000)]

Note: Cash involved is greater than 25% of the value of the exchange, so the gain is not deferred.
### Brigham Manufacturing

2. | | |
---|---|
Cash | 103,000 |
Inventory | 97,000 |
Sales Revenue | 200,000 |

Cost of Goods Sold | 165,000 |
Inventory | 165,000 |

Same reasons as cited in (b) (2) on the previous pages.

**Note:** Even though the exchange lacks commercial substance, cash paid exceeds 25% of total fair value so the transaction is treated as a monetary exchange and recorded at fair value. Note that with this much cash involved, it is unlikely that the exchange would lack commercial substance.

LO: 3, Bloom: AP, Difficulty: Difficult, Time: 30-40, AACSB: Analytic, AICPA BB: None, AICPA FC: Reporting, AICPA PC: None
PROBLEM 10.11

(a) The major characteristics of plant assets, such as land, buildings, and equipment, which differentiate them from other types of assets are presented below.

1. Plant assets are acquired for use in the regular operations of the enterprise and are not for resale.

2. Property, plant, and equipment possess physical substance or existence and are thus differentiated from intangible assets such as patents and goodwill. Unlike other assets that possess physical substance (i.e., raw material), property, plant, and equipment do not physically become part of the product held for resale.

3. These assets are durable and long-term in nature and are usually subject to depreciation.

(b) Transaction 1. To properly reflect cost, assets purchased on deferred payment contracts should be accounted for at the present value of the consideration exchanged between the contracting parties at the date of the consideration. When no interest rate is stated, interest must be imputed at a rate that approximates the rate that would be negotiated in an arm’s-length transaction. In addition, all costs necessary to ready the asset for its intended use are considered to be costs of the asset.

\[
\text{Asset cost} = \text{Present value of ordinary annuity (4 periods) for the note} + \text{Freight + Installation} \\
= \left[ \left( \frac{\$28,000}{4} \right) \times 3.17 \right] + \$425 + \$500 \\
= \$22,190 + 925 \\
= \$23,115
\]
**PROBLEM 10.11 (Continued)**

*Transaction 2.* The lump-sum purchase of a group of assets should be accounted for by allocating the total cost among the various assets on the basis of their relative fair values. The $8,000 of interest expense incurred for financing the purchase is a period cost and is not a factor in determining asset cost.

\[
\begin{align*}
\text{Inventory} & \quad \text{Cost} = 220,000 \times \left(\frac{50,000}{250,000}\right) = 44,000 \\
\text{Land} & \quad \text{Cost} = 220,000 \times \left(\frac{80,000}{250,000}\right) = 70,400 \\
\text{Building} & \quad \text{Cost} = 220,000 \times \left(\frac{120,000}{250,000}\right) = 105,600
\end{align*}
\]

*Transaction 3.* The cost of a nonmonetary asset acquired in an exchange that has commercial substance should be recorded at the fair value of the asset given up plus any cash paid. Furthermore, any gain on the exchange is also recognized.

\[
\begin{align*}
\text{Fair value of trucks} & \quad \text{Cost} = 46,000 \\
\text{Cash paid} & \quad \text{Cost} = 19,000 \\
\text{Cost of land} & \quad \text{Cost} = 65,000
\end{align*}
\]

(c) 1. A building purchased for speculative purposes is not a plant asset as it is not being used in normal operations. The building is more appropriately classified as an investment.

2. The two-year insurance policy covering plant equipment is not a plant asset because it has no physical substance and is not durable. This policy is more appropriately classified as a current asset (for the portion to be used up within the next 12 months), and as an Other asset for the long-term portion.

3. The rights for the exclusive use of a process used in the manufacture of ballet shoes are not plant assets as they have no physical substance. The rights should be classified as an intangible asset.
