

## Chapter 9

### Long-Term Liabilities

---

#### REVIEW QUESTIONS

##### Question 9-1 (LO 9-1)

Capital structure is the mixture of liabilities and stockholders' equity a business uses. Companies in the auto industry, like Ford, typically lean more toward liabilities for their financing, while companies in the computer industry, like Microsoft, use stockholders' equity to a greater extent in financing their asset growth.

##### Question 9-2 (LO 9-1)

One of the primary reasons a company chooses to borrow money rather than issue additional stock relates to taxes. Interest expense incurred when borrowing money is tax deductible, while dividends paid to stockholders is *not* tax deductible. Therefore, debt can be a less costly form of financing.

A second reason relates to control. If a company issues additional shares to investors, control in the company is shared with the new shareholders. If a company borrows funds, voting control in the company is retained.

##### Question 9-3 (LO 9-2)

Both interest expense and the carrying value of the note decrease over time. Interest expense decreases with each installment payment. In each of the following periods, the amount that goes to interest expense becomes less and the amount that goes to decreasing the carrying value becomes more. Interest expense decreases over time because the carrying value decreases over time, and interest is a constant percentage of carrying value.

##### Question 9-4 (LO 9-3)

A lease is a contractual arrangement by which the *lessor* (owner) provides the *lessee* (user) the right to use an asset for a specified period of time. In the balance sheet, a lease asset is reported for the right to use an asset, and a lease liability is reported for the obligation to make lease payments. The amount to report at the beginning of the lease is the present value of the lease payments.

##### Question 9-5 (LO 9-4)

Bond issue costs include underwriting services, legal, accounting, registration, and printing fees incurred to complete the bond issue. An underwriter is the investment house through which the bonds are sold like JPMorgan Chase, Citigroup, and Bank of America.

## ***Answers to Review Questions (continued)***

### **Question 9-6 (LO 9-4)**

A company that borrows by issuing bonds is effectively by-passing the bank and borrowing directly from the investing public, usually at a lower interest rate than from a bank loan. However, issuing bonds entails significant bond issue costs that often exceed 5% of the amount borrowed. For smaller loans, the additional bond issue costs exceed the savings from a lower interest rate, making it more economical to borrow from a bank. For loans of \$20 million or more, the interest rate savings often exceed the additional bond issuance costs, making a bond issue more attractive.

### **Question 9-7 (LO 9-4)**

(a) Secured bonds are supported by assets pledged as collateral. Unsecured bonds, also referred to as debentures, are not backed by a specific asset. (b) Term bonds require payment of the full principal amount of the bond at a single maturity date. Serial bonds require payments in installments over a series of years. (c) Callable bonds allow the issuer to repay the bonds before their scheduled maturity date at a specified call price. Convertible bonds allow the investor to convert each bond into a specified number of shares of common stock.

### **Question 9-8 (LO 9-4)**

Convertible bonds allow the investor to convert each bond into a specified number of shares of common stock. The investor benefits from the conversion feature if share prices rise above the fixed conversion rate. For instance, assume a \$1,000 bond is convertible into 40 shares of common stock, when the stock is trading at \$23 per share. If the stock rises above \$25 (\$1,000/40), the shareholder will benefit by converting the bond into 40 common shares of stock. The borrower also benefits. Convertible bonds sell at a higher price and require a lower interest rate than bonds without a conversion feature.

### **Question 9-9 (LO 9-5)**

(a) The face amount is the amount that will be repaid at maturity. The carrying value is the balance in the Bonds Payable account minus any discount or plus any premium. For example a \$100,000 bond that issues for \$93,205 has a face value of \$100,000 and a carrying value of \$93,205 on the date of issue calculated as Bonds Payable of \$100,000 less Discount on Bonds Payable of \$6,795. The carrying value will increase from \$93,205 to \$100,000 over the life of the bond issue. (b) The stated interest rate is the rate used to determine the periodic interest payments paid by the borrower. The market interest rate represents the true interest rate used by investors to value the bond issue.

### ***Answers to Review Questions (continued)***

#### **Question 9-10 (LO 9-5)**

The bonds issue at a discount when the stated interest rate is less than the market interest rate. The bonds are paying less than the going rate and, therefore, issue at a discount.

#### **Question 9-11 (LO 9-5)**

The bonds issue at a premium when the stated interest rate is more than the market interest rate. The bonds are paying more than the going rate and, therefore, issue at a premium.

#### **Question 9-12 (LO 9-5)**

If bonds issue at a discount, the carrying value of the bonds and interest expense will increase over time. Recall that interest expense is calculated as the carrying value of the bond times the market interest rate. As carrying value increases, interest expense also increases.

#### **Question 9-13 (LO 9-5)**

If bonds issue at a premium, the carrying value of the bonds and interest expense will decrease over time. Recall that interest expense is calculated as the carrying value of the bond times the market interest rate. As carrying value decreases, interest expense also decreases.

#### **Question 9-14 (LO 9-5)**

Cash paid is calculated as the face amount of the bonds times the stated interest rate. Interest expense is the carrying value times the market rate. The difference between interest expense and the cash paid increases the carrying value of the bonds. At the maturity date, the carrying value will equal the face amount.

The amortization schedule is similar when bonds are issued at a premium, except that the difference between interest expense and the cash paid *decreases*, rather than increases, the carrying value of the bonds over time.

#### **Question 9-15 (LO 9-6)**

If interest rates decrease, a company may choose to buy back high interest rate bonds and reissue bonds at a lower interest rate. A company can help protect itself from decreases in interest rates by including a call feature allowing the company to repurchase bonds at a fixed price (like 2% over face amount). When interest rates decrease, companies with a call provision are more likely to repurchase higher-cost debt and then reissue debt at new lower interest rates.

Another incentive to repay debt early is to improve the company's debt and profitability ratios. Repurchasing debt can improve debt ratios. It can also improve profitability. If interest rates increase, bond prices go down and a company repurchasing the lower priced debt can report a gain on the income statement.

**Answers to Review Questions (continued)****Question 9-16 (LO 9-6)**

A loss of \$50,000 is recorded by the issuer retiring the bonds as follows:

<b>Bonds Payable</b>	<b>250,000</b>	
<b>Premium on Bonds Payable</b>	<b>30,000</b>	
<b>Loss</b>	<b>50,000</b>	
<b>Cash</b>		<b>330,000</b>
<i>(Retire bonds before maturity)</i>		

**Question 9-17 (LO 9-7)**

We calculate the issue price of a bond as the present value of the principal (the face amount on the bond due at maturity) *plus* the present value of the periodic interest payments. It is not solely the present value of the principal; rather it is the present value of the principal plus the present value of the interest payments.

**Question 9-18 (LO 9-7)**

The cash payment every six months is \$15,000 ( $\$500,000 \times .06 \times 6/12$ ). There will be 40 interest payments over the 20 years – one every six months.

**Question 9-19 (LO 9-7)**

- (a) \$562,757
- (b) \$500,000
- (c) \$446,612

(Note: These answers are based on a calculator/Excel. Answers using the present value tables may differ just a little due to rounding.)

**Question 9-20 (LO 9-8)**

Additional debt increases risk. Failure to repay debt or the interest associated with the debt on a timely basis may result in default and perhaps even bankruptcy. Other things being equal, the higher the debt, the higher the risk of bankruptcy. Additional debt also offers potential rewards. If a company earns a return in excess of the cost of borrowing the funds, shareholders are provided with a total return greater than what could have been earned with equity funds alone. Unfortunately, borrowing is not always favorable. Sometimes the cost of borrowing the funds exceeds the returns they generate.

## BRIEF EXERCISES

### Brief Exercise 9-1 (LO 9-2)

January 1, 2021

<b>Equipment</b>	<b>30,000</b>	
<b>Notes Payable</b>		<b>30,000</b>
<i>(Issue a note payable)</i>		

January 31, 2021

<b>Interest Expense</b> ( $\$30,000 \times 5\% \times 1/12$ )	<b>125.00</b>	
<b>Notes Payable</b> (difference)	<b>441.14</b>	
<b>Cash</b> (monthly payment)		<b>566.14</b>
<i>(Pay monthly installment on note)</i>		

### Brief Exercise 9-2 (LO 9-2)

January 1, 2021

<b>Building</b>	<b>600,000</b>	
<b>Notes Payable</b>		<b>600,000</b>
<i>(Issue a note payable)</i>		

January 31, 2021

<b>Interest Expense</b> ( $\$600,000 \times 6\% \times 1/12$ )	<b>3,000.00</b>	
<b>Notes Payable</b> (difference)	<b>597.30</b>	
<b>Cash</b> (monthly payment)		<b>3,597.30</b>
<i>(Pay monthly installment on note)</i>		

### Brief Exercise 9-3 (LO 9-3)

January 1, 2021

<b>Lease Asset</b>	<b>100,000</b>	
<b>Lease Payable</b>		<b>100,000</b>
<i>(Sign a lease)</i>		

**Brief Exercise 9-4** (LO 9-3)

	Assets	Liabilities	Stockholders' Equity
Balance before:	<b>\$600,000</b>	<b>\$400,000</b>	<b>\$200,000</b>
Effect of lease:	<b>+ 40,000</b>	<b>+ 40,000</b>	
Balance after:	<b>\$640,000</b>	<b>\$440,000</b>	<b>\$200,000</b>

**Exercise 9-5** (LO 9-4)**Terms**

- |              |                      |
|--------------|----------------------|
| <u>  e  </u> | 1. Sinking fund.     |
| <u>  g  </u> | 2. Secured bond.     |
| <u>  c  </u> | 3. Unsecured bond.   |
| <u>  f  </u> | 4. Term bond.        |
| <u>  b  </u> | 5. Serial bond.      |
| <u>  a  </u> | 6. Callable bond.    |
| <u>  d  </u> | 7. Convertible bond. |
| <u>  h  </u> | 8. Bond issue costs. |

**Definitions**

- Allows the issuer to pay off the bonds early at a fixed price.
- Matures in installments.
- Secured only by the “full faith and credit” of the issuing corporation.
- Allows the investor to transfer each bond into shares of common stock.
- Money set aside to pay debts as they come due.
- Matures on a single date.
- Supported by specific assets pledged as collateral by the issuer.
- Includes underwriting, legal, accounting, registration, and printing fees.

**Brief Exercise 9-6** (LO 9-5)

1.

January 1, 2021

<b>Cash</b>	<b>70,000</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<i>(Issue bonds at face amount)</i>		

2.

June 30, 2021

<b>Interest Expense</b>	<b>2,450</b>	
<b>Cash</b> ( $\$70,000 \times 7\% \times \frac{1}{2}$ )		<b>2,450</b>
<i>(Pay semiannual interest)</i>		

**Brief Exercise 9-7** (LO 9-5)

1.

January 1, 2021

<b>Cash</b>	<b>63,948</b>	
<b>Discount on Bonds Payable</b>	<b>6,052</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<i>(Issue bonds at a discount)</i>		

2.

June 30, 2021

<b>Interest Expense</b> ( $\$63,948 \times 8\% \times \frac{1}{2}$ )	<b>2,558</b>	
<b>Discount on Bonds Payable</b> (difference)		<b>108</b>
<b>Cash</b> ( $\$70,000 \times 7\% \times \frac{1}{2}$ )		<b>2,450</b>
<i>(Pay semiannual interest)</i>		

**Brief Exercise 9-8** (LO 9-5)

1.

January 1, 2021

<b>Cash</b>	<b>76,860</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<b>Premium on Bonds Payable</b>		<b>6,860</b>
<i>(Issue bonds at a premium)</i>		

2.

June 30, 2021

<b>Interest Expense</b> ( $\$76,860 \times 6\% \times \frac{1}{2}$ )	<b>2,306</b>	
<b>Premium on Bonds Payable (difference)</b>	<b>144</b>	
<b>Cash</b> ( $\$70,000 \times 7\% \times \frac{1}{2}$ )		<b>2,450</b>
<i>(Pay semiannual interest)</i>		

**Brief Exercise 9-9** (LO 9-5)

1.

January 1, 2021

<b>Cash</b>	<b>70,000</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<i>(Issue bonds at face amount)</i>		

2.

December 31, 2021

<b>Interest Expense</b>	<b>4,900</b>	
<b>Cash</b> ( $\$70,000 \times 7\%$ )		<b>4,900</b>
<i>(Pay annual interest)</i>		

**Brief Exercise 9-10** (LO 9-5)

1.

January 1, 2021

<b>Cash</b>	<b>64,008</b>	
<b>Discount on Bonds Payable</b>	<b>5,992</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<i>(Issue bonds at a discount)</i>		

2.

December 31, 2021

<b>Interest Expense</b> ( $\$64,008 \times 8\%$ )	<b>5,121</b>	
<b>Discount on Bonds Payable</b> (difference)		<b>221</b>
<b>Cash</b> ( $\$70,000 \times 7\%$ )		<b>4,900</b>
<i>(Pay annual interest)</i>		

**Brief Exercise 9-11** (LO 9-5)

1.

January 1, 2021

<b>Cash</b>	<b>76,799</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<b>Premium on Bonds Payable</b>		<b>6,799</b>
<i>(Issue bonds at a premium)</i>		

2.

December 31, 2021

<b>Interest Expense</b> ( $\$76,799 \times 6\%$ )	<b>4,608</b>	
<b>Premium on Bonds Payable</b> (difference)	<b>292</b>	
<b>Cash</b> ( $\$70,000 \times 7\%$ )		<b>4,900</b>
<i>(Pay annual interest)</i>		

**Brief Exercise 9-12** (LO 9-5)

\$2,653 ( $\$88,443 \times 6\% \times \frac{1}{2}$ ).

**Brief Exercise 9-13** (LO 9-5)

Interest expense for the year ended December 31, 2021 would be \$4,157. Interest expense for the first six months ended June 30, 2021 is \$2,075 ( $\$82,985 \times 5\% \times \frac{1}{2}$ ). Interest expense for the next six months ended December 31, 2021 is \$2,082 ( $[\$82,985 + (\$2,075 - \$1,800)] \times 5\% \times \frac{1}{2}$ ). Thus, the total interest expense for the year is  $\$2,075 + \$2,082 = \$4,157$ .

**Brief Exercise 9-14** (LO 9-5)

- |                                    |               |               |
|------------------------------------|---------------|---------------|
| <b>Cash</b>                        | <b>63,948</b> |               |
| <b>Discount on Bonds Payable</b>   | <b>6,052</b>  |               |
| <b>Bonds Payable</b>               |               | <b>70,000</b> |
| <i>(Issue bonds at a discount)</i> |               |               |
- |                                  |              |              |
|----------------------------------|--------------|--------------|
| <b>Interest Expense</b>          | <b>2,558</b> |              |
| <b>Discount on Bonds Payable</b> |              | <b>108</b>   |
| <b>Cash</b>                      |              | <b>2,450</b> |
| <i>(Pay semiannual interest)</i> |              |              |
- Interest expense increases each period because the carrying value of the debt issued at a discount increases over time.

**Brief Exercise 9-15** (LO 9-5)

1.

<b>Cash</b>	<b>76,860</b>	
<b>Bonds Payable</b>		<b>70,000</b>
<b>Premium on Bonds Payable</b>		<b>6,860</b>
<i>(Issue bonds at a premium)</i>		

2.

<b>Interest Expense</b>	<b>2,306</b>	
<b>Premium on Bonds Payable</b>	<b>144</b>	
<b>Cash</b>		<b>2,450</b>
<i>(Pay semi-annual interest)</i>		

3. Interest expense decreases each period because the carrying value of the debt issued at a premium decreases over time.

**Brief Exercise 9-16** (LO 9-6)

<b>Bonds Payable</b>	<b>70,000</b>	
<b>Loss</b>	<b>3,832</b>	
<b>Discount on Bonds Payable</b>		<b>5,832</b>
<b>Cash</b>		<b>68,000</b>
<i>(Retire bonds before maturity)</i>		

**Brief Exercise 9-17** (LO 9-6)

<b>Bonds Payable</b>	<b>70,000</b>	
<b>Premium on Bonds Payable</b>	<b>6,567</b>	
<b>Gain</b>		<b>4,567</b>
<b>Cash</b>		<b>72,000</b>
<i>(Retire bonds before maturity)</i>		

**Brief Exercise 9-18** (LO 9-7)

If the market rate is 7%, the bonds will issue at \$60,000 (face amount).

**Calculator Input**

<b>Bond Characteristics</b>	<b>Key</b>	<b>Amount</b>
1. Face amount	FV	\$60,000
2. Interest payment	PMT	$\$2,100 = \$60,000 \times 7\% \times \frac{1}{2} \text{ year}$
3. Periods to maturity	N	$20 = 10 \text{ years} \times 2 \text{ periods each year}$
4. Market interest rate	I	$3.5\% = 7\% / 2 \text{ periods each year}$

**Calculator Output**

Issue price	PV	\$60,000
-------------	----	----------

**Brief Exercise 9-19** (LO 9-7)

If the market rate is 8%, the bonds will issue at \$54,812 (a discount).

<b>Calculator Input</b>		
<b>Bond Characteristics</b>	<b>Key</b>	<b>Amount</b>
1. Face amount	FV	\$60,000
2. Interest payment	PMT	$\$2,100 = \$60,000 \times 7\% \times \frac{1}{2} \text{ year}$
3. Periods to maturity	N	$30 = 15 \text{ years} \times 2 \text{ periods each year}$
4. Market interest rate	I	$4\% = 8\% / 2 \text{ periods each year}$
<b>Calculator Output</b>		
Issue price	PV	\$54,812

**Brief Exercise 9-20** (LO 9-7)

If the market rate is 6%, the bonds will issue at \$66,934 (a premium).

<b>Calculator Input</b>		
<b>Bond Characteristics</b>	<b>Key</b>	<b>Amount</b>
1. Face amount	FV	\$60,000
2. Interest payment	PMT	$\$2,100 = \$60,000 \times 7\% \times \frac{1}{2} \text{ year}$
3. Periods to maturity	N	$40 = 20 \text{ years} \times 2 \text{ periods each year}$
4. Market interest rate	I	$3\% = 6\% / 2 \text{ periods each year}$
<b>Calculator Output</b>		
Issue price	PV	\$66,934

**Brief Exercise 9-21** (LO 9-8)

1.

<b>Total Liabilities</b>	÷	<b>Stockholders' Equity</b>	=	<b>Debt to Equity Ratio</b>
\$628	÷	\$99	=	6.34

2.

<b>Net Income</b>	÷	<b>Average Total Assets</b>	=	<b>Return on Assets Ratio</b>
\$66	÷	\$722.5*	=	9.1%

\*(\$718 + \$727) / 2

3.

<b>Net Income + Interest + Taxes</b>	÷	<b>Interest</b>	=	<b>Times Interest Earned Ratio</b>
\$125	÷	\$15	=	8.3

## EXERCISES

### Exercise 9-1 (LO 9-1)

#### Requirement 1

	<u>Issue Note</u>	<u>Issue Stock</u>
Operating income	\$11,000,000	\$11,000,000
Interest expense (note only)	2,450,000	
Income before tax	8,550,000	11,000,000
Income tax expense (35%)	2,992,500	3,850,000
Net income	<u>\$ 5,557,500</u>	<u>\$ 7,150,000</u>
# of shares	4,000,000	5,000,000
Earnings per share (Net income / # of shares)	<u>\$1.39</u>	<u>\$1.43</u>

#### Requirement 2

Issuing stock results in higher earnings per share. Issuing the note results in earnings per share of \$1.39 compared with \$1.43 for issuing stock.

**Exercise 9-2 (LO 9-2)**January 1, 2021

<b>Cash</b>	<b>50,000</b>	
<b>Notes Payable</b>		<b>50,000</b>
<i>(Issue a note payable)</i>		

January 31, 2021

<b>Interest Expense</b> ( $\$50,000 \times 6\% \times 1/12$ )	<b>250.00</b>	
<b>Notes Payable</b> (difference)	<b>578.64</b>	
<b>Cash</b> (monthly payment)		<b>828.64</b>
<i>(Pay monthly installment on note)</i>		

February 28, 2021

<b>Interest Expense</b> ( $[\$50,000 - 578.64] \times 6\% \times 1/12$ )	<b>247.11</b>	
<b>Notes Payable</b> (difference)	<b>581.53</b>	
<b>Cash</b> (monthly payment)		<b>828.64</b>
<i>(Pay monthly installment on note)</i>		

**Exercise 9-3 (LO 9-2)****Requirement 1****January 1, 2021**

<b>Land</b>	<b>800,000</b>	
<b>Notes Payable</b>		<b>800,000</b>
<i>(Issue a note payable for land)</i>		

**Requirement 2****June 30, 2021**

<b>Interest Expense</b> ( $\$800,000 \times 6\% \times 6/12$ )	<b>24,000.00</b>	
<b>Notes Payable</b> (difference)	<b>191,221.64</b>	
<b>Cash</b> (semiannual payment)		<b>215,221.64</b>
<i>(Pay annual installment on note)</i>		

**December 31, 2021**

<b>Interest Expense</b> ( $[\$800,000 - 191,221.64] \times 6\% \times 6/12$ )	<b>18,263.35</b>	
<b>Notes Payable</b> (difference)	<b>196,958.29</b>	
<b>Cash</b> (annual payment)		<b>215,221.64</b>
<i>(Pay annual installment on note)</i>		

**Requirement 3**

$$\text{Notes Payable} = \$800,000 - \$191,221.64 - \$196,958.29 = \$411,820.07$$

$$\text{Interest Expense} = \$24,000.00 + \$18,263.35 = \$42,263.35$$

**Exercise 9-4** (LO 9-3, LO 9-8)**Requirement 1**

<b>Assets</b>	<b>=</b>	<b>Liabilities</b>	<b>+</b>	<b>Stockholders' Equity</b>
\$25 million		\$15 million		?

Stockholders' equity must be \$10 million (\$25 million – \$15 million).

**Requirement 2**

<b>Total Liabilities</b>	<b>÷</b>	<b>Stockholders' Equity</b>	<b>=</b>	<b>Debt to Equity Ratio</b>
\$15 million	÷	\$10 million	=	1.50

**Requirement 3**

<b>Total Liabilities</b>	<b>÷</b>	<b>Stockholders' Equity</b>	<b>=</b>	<b>Debt to Equity Ratio</b>
\$15 + \$2 = \$17 million	÷	\$10 million	=	1.70

**Requirement 4**

Yes. A higher ratio typically indicates greater risk.

**Exercise 9-5** (LO 9-3)**Requirement 1**

PV of lease payments =  $\$3,618.18 \times 22.110544^* = \$80,000$  (rounded)

\* Present value of an annuity;  $n = 24$ ;  $i = 8\%/12$

**Requirement 2**

**June 1, 2021**

<b>Lease Asset</b>	<b>80,000</b>	
<b>Lease Payable</b>		<b>80,000</b>
<i>(Record a 24-month lease)</i>		

**Exercise 9-6 (LO 9-3)****Requirement 1**

PV of lease payments =  $\$29,122.87 \times 17.16864^* = \$500,000$  (rounded)

\* Present value of an annuity;  $n = 20$ ;  $i = 6\%/4$  (Table 4)

**Requirement 2****June 30, 2021**

<b>Lease Asset</b>	<b>500,000</b>	
<b>Lease Payable</b>		<b>500,000</b>
<i>(Record a 20-quarter lease)</i>		

**Exercise 9-7 (LO 9-5)****January 1, 2021**

<b>Cash</b>	<b>500,000</b>	
<b>Bonds Payable</b>		<b>500,000</b>
<i>(Issue bonds at face amount)</i>		

**June 30, 2021**

<b>Interest Expense</b>	<b>22,500</b>	
<b>Cash</b> ( $\$500,000 \times 9\% \times \frac{1}{2}$ )		<b>22,500</b>
<i>(Pay semiannual interest)</i>		

**December 31, 2021**

<b>Interest Expense</b>	<b>22,500</b>	
<b>Cash</b> ( $\$500,000 \times 9\% \times \frac{1}{2}$ )		<b>22,500</b>
<i>(Pay semiannual interest)</i>		

**Exercise 9-8** (LO 9-5)**Requirement 1**

(1)	(2)	(3)	(4)	(5)

**Calculator Input**

<b>Bond Characteristics</b>	<b>Key</b>	<b>Amount</b>
1. Face amount	FV	\$26,000,000
2. Interest payment	PMT	\$910,000 = \$26,000,000 × 7% × ½ year
3. Periods to maturity	N	20 = 10 years × 2 periods each year
4. Market interest rate	I	3.5% = 7% / 2 periods each year

**Calculator Output**

Issue price	PV	\$26,000,000
-------------	----	--------------

**Requirement 3**

Discount. The issue price is \$24,233,258.

**Calculator Input**

<b>Bond Characteristics</b>	<b>Key</b>	<b>Amount</b>
1. Face amount	FV	\$26,000,000
2. Interest payment	PMT	\$910,000 = $\$26,000,000 \times 7\% \times \frac{1}{2} \text{ year}$
3. Periods to maturity	N	20 = 10 years $\times$ 2 periods each year
4. Market interest rate	I	4% = 8% / 2 periods each year

**Calculator Output**

Issue price	PV	\$24,233,258
-------------	----	--------------

**Exercise 9-20 (LO 9-8)****Requirement 1**

	<b>Total Liabilities</b>	÷	<b>Stockholders' Equity</b>	=	<b>Debt to Equity Ratio</b>
E-Travel	\$4,254,475	÷	\$3,182,681	=	1.34
Pricecheck	\$486,610	÷	\$1,607,614	=	0.30

E-Travel has a higher debt to equity ratio than Pricecheck.

**Requirement 2**

	<b>Net Income + Interest + Taxes</b>	÷	<b>Interest</b>	=	<b>Times Interest Earned Ratio</b>
E-Travel	\$588,159	÷	\$94,233	=	6.2
Pricecheck	\$600,724	÷	\$34,084	=	17.6

Pricecheck, with a times interest earned ratio of 17.6, is better able to meet interest payments as they become due than E-Travel with a ratio of only 6.2.

Total operating expenses		<u>58,100</u>
Operating income		24,400
Interest expense		<u>583</u>
Income before taxes		23,817
Income tax expense		<u>8,000</u>
Net income		<u>\$ 15,817</u>

**Requirement 5**

Freedom Fireworks Classified Balance Sheet January 31, 2021			
<u>Assets</u>		<u>Liabilities</u>	
Cash	\$165,320	Accounts payable	\$ 6,700
Accounts receivable 133,000		Salaries payable	26,100
Less: Allowance <u>(4,100)</u>	128,900	Income tax payable	8,000
Inventory	<u>39,500</u>	Notes payable (Current)	<u>17,411</u>
Total current assets	333,720	Total current liabilities	58,211
		Notes payable (Long-term)	<u>81,192</u>
		Total liabilities	139,403
Land	67,300	<b><u>Stockholders' Equity</u></b>	
Buildings	120,000	Common stock	200,000
Less: Accumulated Depreciation <u>(10,400)</u>		Retained earnings	<u>171,217</u> *
		Total stockholders' equity	<u>371,217</u>
		Total liabilities and stockholders' equity	<u>\$510,620</u>
Total assets	<u>\$510,620</u>		

\* Retained earnings = Beginning retained earnings + Net income – Dividends  
= \$155,400 + \$15,817 – \$0  
= \$171,217

**Exercise 9-21 (concluded)****Requirement 6**

January 31, 2021	Debit	Credit
<b>Sales Revenue</b>	195,000	
<b>Retained Earnings</b> (Close revenue accounts)		195,000
<b>Retained Earnings</b>	179,183	
<b>Cost of Goods Sold</b>		112,500
<b>Salaries Expense</b>		55,000
<b>Bad Debt Expense</b>		2,300
<b>Depreciation Expense</b>		800
<b>Interest Expense</b>		583
<b>Income Tax Expense</b> (Close expense accounts)		8,000

**Requirement 7**

(a) The debt to equity ratio is:

$$\text{Debt to Equity Ratio} = \frac{\text{Total Liabilities}}{\text{Stockholders' Equity}} = \frac{\$139,403}{\$371,217} = \mathbf{0.38}$$

Freedom Fireworks is **less** leveraged than the industry average. Freedom Fireworks has a lower proportion of liabilities in relation to stockholders' equity than the industry average of 1.0.

(b) The times interest earned ratio is:

$$\text{Times Interest Earned Ratio} = \frac{\text{Net Income} + \text{Interest Expense} + \text{Tax Expense}}{\text{Interest Expense}} = \frac{\$15,817 + \$583 + \$8,000}{\$583} = \mathbf{41.9}$$

Compared to the industry average of 20 times, Freedom Fireworks is **more** able to meet interest payments than other companies in the same industry.

(c) Based on the debt to equity ratio and the times interest earned ratio, ratio, Freedom Fireworks would more likely receive a **lower** interest rate than the average borrowing rate in the industry. Freedom Fireworks carries less debt than the industry average and is better able to meet interest payments than the average company in the industry.

## PROBLEMS: SET A

### Problem 9-1A (LO 9-2)

#### Requirement 1

January 1, 2021

<b>Building</b>	<b>360,000</b>	
<b>Cash</b>		<b>60,000</b>
<b>Notes Payable</b>		<b>300,000</b>
<i>(Issue a mortgage note payable)</i>		

#### Requirement 2

(1)	(2)	(3)	(4)	(5)
Date	Cash Paid	Interest Expense	Decrease in Carrying Value	Carrying Value
	Monthly Payment	Carrying Value x 0.07 × 1/12	(2) – (3)	Prior Carrying Value – (4)
1/1/2021				\$ 300,000.00
1/31/2021	\$3,483.25	\$ 1,750.00	\$ 1,733.25	298,266.75
2/28/2021	3,483.25	1,739.89	1,743.36	296,523.39

#### Requirement 3

January 31, 2021

<b>Interest Expense</b> ( $\$300,000 \times 7\% \times 1/12$ )	<b>1,750.00</b>	
<b>Notes Payable</b> (difference)	<b>1,733.25</b>	
<b>Cash</b> (monthly payment)		<b>3,483.25</b>
<i>(Pay monthly installment on note)</i>		

In the first monthly payment, \$1,750.00 goes to interest expense and \$1,733.25 goes to reducing the carrying value of the loan.

#### Requirement 4

Total payments on the loan are \$417,990. Since actual payments on the loan are \$300,000, the remainder of \$117,990 is the amount paid for interest expense.

**Problem 9-2A (LO 9-2)****Requirement 1****January 1, 2021**

12/31/2021	45,500	42,742	2,758	1,421,967

**Problem 9-8A (LO 9-8)****Requirement 1**

(\$ in millions)	Total Liabilities	÷	Stockholders' Equity	=	Debt to Equity Ratio
Bahama Bay	\$5,724	÷	\$3,137	=	1.82
Caribbean Key	\$2,819	÷	\$4,821	=	0.58

Bahama Bay has a higher debt to equity ratio than Caribbean Key.

**Requirement 2**

(\$ in millions)	Net Income	÷	Average Total Assets	=	Return on Assets Ratio
Bahama Bay	\$562	÷	\$9,210.5*	=	6.1%
Caribbean Key	\$88	÷	\$7,573.5**	=	1.2%
*(\$8,861 + \$9,560) / 2					
**(\$7,640 + \$7,507) / 2					

Bahama Bay is more profitable than Caribbean Key.

**Requirement 3**

(\$ in millions)	Net Income + Interest + Taxes	÷	Interest	=	Times Interest Earned Ratio
Bahama Bay	\$880	÷	\$170	=	5.2
Caribbean Key	\$166	÷	\$70	=	2.4

Bahama Bay, with a times interest earned ratio of 5.2, is better able to meet interest payments as they become due than Caribbean Key with a ratio of only 2.4.

## PROBLEMS: SET B

### Problem 9-1B (LO 9-2)

#### Requirement 1

January 1, 2021

<b>Building</b>	<b>610,000</b>	
<b>Cash</b>		<b>110,000</b>
<b>Notes Payable</b>		<b>500,000</b>
<i>(Issue a mortgage note payable)</i>		

#### Requirement 2

(1)	(2)	(3)	(4)	(5)
Date	Cash Paid	Interest Expense	Decrease in Carrying Value	Carrying Value
	Monthly Payment	Carrying Value $\times 0.09 \times 1/12$	<u>(2) – (3)</u>	Prior Carrying Value – (4)
1/1/2021				\$ 500,000.00
1/31/2021	\$ 5,071.33	\$ 3,750.00	\$ 1,321.33	498,678.67
2/28/2021	5,071.33	3,740.09	1,331.24	497,347.43

#### Requirement 3

January 31, 2021

<b>Interest Expense</b> ( $\$500,000 \times 9\% \times 1/12$ )	<b>3,750.00</b>	
<b>Notes Payable</b> (difference)	<b>1,321.33</b>	
<b>Cash</b> (monthly payment)		<b>5,071.33</b>
<i>(Pay monthly installment on note )</i>		

In the first monthly payment, \$3,750.00 goes to interest expense and only \$1,321.33 goes to reducing the carrying value of the loan.

#### Requirement 4

Over the 15 year mortgage, \$412,839 is interest expense and \$500,000 goes to reducing the carrying value of the loan. Interest expense over the 15 year mortgage is calculated as the total payments of \$912,839 minus the \$500,000 carrying value of the loan.

**Problem 9-2B (LO 9-2)****Requirement 1****January 1, 2021**

1/ 1 /2021				\$ 916,254
6/30/2021	\$ 25,500	\$ 22,906	\$ 2,594	913,660
12/31/2021	25,500	22,842	2,658	911,002

**Problem 9-8B** (LO 9-8)**Requirement 1**

(\$ in millions)	<b>Total Liabilities</b>	÷	<b>Stockholders' Equity</b>	=	<b>Debt to Equity Ratio</b>
Surf City	\$11,519	÷	\$8,309	=	1.39
Paradise Falls	\$15,232	÷	\$23,929	=	0.64

Surf City has a higher debt to equity ratio than Paradise Falls.

**Requirement 2**

(\$ in millions)	<b>Net Income</b>	÷	<b>Average Total Assets</b>	=	<b>Return on Assets Ratio</b>
Surf City	\$18	÷	\$19,816*	=	0.1%
Paradise Falls	\$1,298	÷	\$38,899**	=	3.3%

\*(\$19,828 + \$19,804) / 2

\*\*(\$39,161 + \$38,637) / 2

Paradise Falls is more profitable than Surf City.

**Requirement 3**

(\$ in millions)	<b>Net Income + Interest + Taxes</b>	÷	<b>Interest</b>	=	<b>Times Interest Earned Ratio</b>
Surf City	\$374	÷	\$356	=	1.1
Paradise Falls	\$1,638	÷	\$336	=	4.9

Paradise Falls, with a times interest earned ratio of 4.9, is better able to meet interest payments as they become due than Surf City with a ratio of only 1.1.

## Financial Analysis: American Eagle

### AP9-2

(\$ in thousands)

#### Requirement 1

	Total Liabilities	÷	Stockholders' Equity	=	Debt to Equity Ratio
2018	\$569,522	÷	\$1,246,791	=	0.46
2017	\$578,091	÷	\$1,204,569	=	0.48

The ratio **decreased** in the more recent year.

#### Requirement 2

	Net Income	÷	Average Total Assets	=	Return on Assets
2018	\$204,163	÷	(\$1,816,313 + 1,782,660)/2	=	11.3%

This rate **exceeds** the approximate cost of borrowing.

#### Requirement 3

The bankruptcy risk of American Eagle is **low**. The company carries very little debt and has several large lines of credit that it could use to borrow in the future if necessary.

## Financial Analysis: Buckle

### AP9-3

(\$ in thousands)

#### Requirement 1

	Total Liabilities	÷	Stockholders' Equity	=	Debt to Equity Ratio
2018	\$146,868	÷	\$391,248	=	0.38
2017	\$149,308	÷	\$430,539	=	0.35

The ratio **increased** in the more recent year.

#### Requirement 2

	Net Income	÷	Average Total Assets	=	Return on Assets
2018	\$89,707	÷	(\$538,116 + \$579,847)/2	=	16.0%

This rate **exceeds** the approximate cost of borrowing.

#### Requirement 3

The bankruptcy risk of The Buckle is **low**. The company carries no bank borrowings and has an unsecured line of credit that it could use to borrow in the future if necessary.

## Comparative Analysis: American Eagle vs. Buckle

### AP9-4

(\$ in thousands)

#### Requirement 1

	Total Liabilities	÷	Stockholders' Equity	=	Debt to Equity Ratio
American Eagle	\$569,522	÷	\$1,246,791	=	0.46
Buckle	\$146,868	÷	\$391,248	=	0.38

**American Eagle** has a riskier (higher) debt to equity ratio. The ratios are both much **lower** than those for Coca-Cola and Pepsi reported in the chapter. The soft-drink industry maintains a higher debt to equity ratio than the retail clothing industry.

#### Requirement 2

	Net Income	÷	Average Total Assets	=	Return on Assets Ratio
American Eagle	\$204,163	÷	(\$1,816,313 + 1,782,660)/2	=	11.3%
Buckle	\$89,707	÷	(\$538,116 + \$579,847)/2	=	16.0%

**Buckle** appears more profitable.

## Ethics

### AP9-5

1. Current liabilities are understated and long-term liabilities are overstated by \$447,116.

Current liabilities are defined as debt that is due within one year of the balance sheet date. Because \$447,116 of the principal will be paid in the following year, this portion of the long-term note should be classified as current.

2.

	<b>Current Ratio</b>		<b>Debt to Equity Ratio</b>	
	Current Assets/ Current Liabilities		Total Liabilities / Total Equity	
With Jim's suggestion	\$3,100,000 / \$2,700,000	= 1.15	\$5,283,026 / \$4,000,000	= 1.32
Without Jim's suggestion	\$3,100,000 / \$3,147,116	= 0.99	\$5,283,026 / \$4,000,000	= 1.32

3. Yes.

By misclassifying the current portion of the note as part of long-term liabilities, the current ratio is overstated. Thus, the company's ability to pay its debt in the following year is overstated. Lenders may not understand the company's true ability to pay debt. The expectation of using long-term profits to pay long-term debt is not a justification for the misclassification. There are no guarantees that those profits will exist, and to the extent the company cannot pay its debt in the following year, longer-term profits are not helpful. The debt to equity ratio does not reveal this misclassification because the numerator is total liabilities. Whether the debt is classified as current or long-term has no effect on the reported amount of total liabilities.

4. No.

The portion of the note that is due within one year of the balance sheet date (\$447,116) should be reported as a current liability. The portion of the note due in more than one year should be classified as a long-term liability (\$2,135,910 = \$2,583,026 – \$447,116).

## Internet Research

### AP9-6

This case provides an opportunity for students to learn more about credit ratings at Standard & Poor's. This case also allows students to access current items in the business press. Answers to the assignment will vary depending on the news items chosen.

## Written Communication

### AP9-7

#### Requirement 1

A company that borrows by issuing bonds is effectively by-passing the bank and borrowing directly from the investing public, usually at a lower interest rate than it would in a bank loan. However, issuing bonds entails significant bond issue costs for the underwriter, legal fees, and accounting costs. For smaller loans, the additional bond issuance costs exceed the savings from a lower interest rate, making it more economical to borrow from a bank. For loans of \$20 million or more, the interest rate savings often exceed the additional bond issuance costs, making a bond issue more attractive.

#### Requirement 2

One of the primary reasons for issuing bonds over issuing common stock relates to taxes. Interest expense incurred when borrowing money is tax deductible, while dividends paid to stockholders are *not* tax deductible. Therefore, debt can be a less costly form of financing.

#### Requirement 3

The price of a bond is calculated as the present value of the principal (the face amount on the bond due at maturity) *plus* the present value of the periodic interest payments. The stated rate is used to calculate the periodic interest payment each period. The market rate is used to calculate the present value of the principal and periodic interest payments.

## Earnings Management

### AP9-8

#### Requirement 1

-------------	----	--------------

**Requirement 4**December 31, 2021

<b>Bonds Payable</b>	<b>100,000,000</b>	
<b>Premium on Bonds Payable</b>	<b>7,794,581</b>	
<b>Gain</b>		<b>27,306,486</b>
<b>Cash</b>		<b>80,488,095</b>
<i>(Retire bonds before maturity)</i>		

The transaction increases net income by the amount of the gain, \$27,306,486.

**Requirement 5**

No.

Investors likely would not agree with David Plesko's plan. To report the \$27 million gain on repurchase, the company must give up bonds costing only \$6 million (\$100 million times 6%) in interest each year and reissue new bonds requiring the payment of \$9 million (\$100 million times 9%) in interest each year. The additional interest cost of \$3 million each year will reduce the company's cash flows.
